

Please be advised that this course is due to be revised by Quarter 3, 2013.

Course Overview

The 1100D series is one of Perkins latest emission controlled engines with many new design features not before seen on Perkins products. This course has been designed to go through all the features of this new engine and is especially suited to workshop staff involved with service and overhaul of the engines.

Pre-requisite

Persons wishing to attend this course should first attend PT62 or have covered the content in a previous course.

Course Objectives

Upon completion of the course the participants will be able to -

- Recognise the components associated with 1106D engines.
 - Perform strip, rebuild and service operations.
 - Perform systematic electrical fault diagnostics.

Course Outline

- Mechanical overview.
 - Service operations.
- Electrical/electronic overview.
- Use and operation of the electronic service tool relating to 1100D.

Course Duration

2 Days

Course Location

Peterborough
